

AMENDMENTS TO THE CLAIMS:

This listing of claims will replace all prior versions, and listings, of claims in the application:

1. Cancelled.

2. (Currently Amended) A serving device for serving pages of viewable data to browsing devices connected to a network, wherein a page of said viewable data comprises content data defining text and/or graphics and formatting data which specifies locations of said text and/or graphics within a page, and said viewable data is displayed at a browsing device, said serving device comprising:

a user database comprising data relating to user preferences determined from a history of usage by users;

identifying means for identifying requests from browsing devices that define a request for specified content data and a user identifier;

data storage means storing content data; and

processing means configured such that, in response to said identifying means identifying a request for specified content data, said processing means:

- (a) reads specified user data from said user database, such that said specified user data corresponds to a received user identifier;
- (b) selects content data from said storage means in dependence of the content data specified in a request received by said identifying means and said specified user data read from said database;
- (c) receives format identifiers identifying the type of formatting required;

- (d) executes a first set of functions to generate viewable data comprising said selected content data and first formatting data when a first format identifier is received; and
- (e) executes a second set of functions to generate viewable data comprising said selected content data and second formatting data when a second format identifier is received,

such that viewable data is served to a browser for display with locations of said text and/or graphics ~~which depends~~that depend upon the particular format identifier received by the processing means.

3. (Previously Presented) A serving device as in claim 2 wherein said format identifiers are received from browsing devices with said requests for specified content data, such that viewable data is served to a browsing device for display with a first format when a first format identifier is received from said browsing device, and a second format when a second format identifier is received from said browsing device.

4-7. Cancelled.

8. (Previously Presented) A serving device as in claim 2 further comprising a text database which has an index and said processing means is further configured to adjust the index of said text database after reading specified user data but before selecting content data such that said selected content data is dependent upon a received user identifier.

9. (Previously Presented) A serving device as in claim 2 further comprising a graphics database which has an index and said processing means is further configured to adjust

the index of said graphics database after reading specified user data but before selecting content data such that said selected content data is dependent upon a received user identifier.

10. (Currently Amended) A serving device for serving pages of viewable data to browsing devices connected to a network, wherein a page of said viewable data comprises content data defining text and/or graphics and formatting data which specifies locations of said text and/or graphics within a page, and said viewable data is displayed at a browsing device said serving device comprising:

identifying means for identifying requests from browsing devices that define a request for specified content data;

data storage means storing content data;

a function database comprising a plurality of sets of functions including a first set of functions and a second set of functions;

a user database comprising information relating to user preferences; and

processing means configured such that, in response to said identifying means identifying a request for specified ~~data~~ content data, said processing means:

(a) reads user preference information from said user database in response to received user identifier;

(b) selects content data from said storage means in dependence of the content data specified in a request received by said identifying means,

(c) receives format identifiers identifying the type of formatting required,

(d) selects a set of functions from said function database in dependence upon said received format identifier and said read user preference information:

(e) executes a first set of functions to generate viewable data comprising said selected content data and first formatting data when a first format identifier is received, and

(f) executes a second set of functions to generate viewable data comprising said selected content data and second formatting data when a second format identifier is received,

such that viewable data is served to a browser for display with locations of said text and/or graphics ~~which~~that depend upon the particular format identifier received by the processing means.

11. (Currently Amended) A serving device for serving pages of viewable data to browsing devices connected to a network, wherein a page of said viewable data comprises content data defining text and/or graphics and formatting data which specifies locations of said text and/or graphics within a page, and said viewable data is displayed at a browsing device, said serving device comprising:

identifying means for identifying requests from browsing devices that define a request for specified content data;

data storage means storing content data,

a user database comprising information relating to user preferences;

a function database containing a plurality of sets of functions and an index,

processing means configured such that, in response to said identifying means identifying a request for specified content data, said processing means:

- (a) reads specific user preference information from said user database in response to a received user identifier;
 - (b) adjusts the relationship between said index and said sets of functions within said function database in response to said specific user preference information;
 - (c) selects content data from said storage means in dependence of the content data specified in a request received by said identifying means,
 - (d) receives format identifiers identifying the type of formatting required,
 - (e) executes a first set of functions to generate viewable data comprising said selected content data and first formatting data when a first ~~format~~format identifier is received; and
 - (f) executes a second set of functions to generate viewable data comprising said selected content data and second formatting data when a second format identifier is received,
- such that viewable data is served to a browser for display with locations of said text and/or graphics ~~which~~that depend upon the particular format identifier received by the processing means and upon said specific user information.

12. (Previously Presented) A serving device as in claim 2 wherein said data storage means storing content data is a content database and said serving device further comprises a separate function database comprising a plurality of sets of functions including said first set of functions and said second set of functions, whereby said content database may be edited before said processing means combines said content data with formatting data.

13. (Previously Presented) A serving device as in claim 2 wherein said viewable data is HTML (hypertext markup language) data, and said first and second formatting data comprise of HTML tags.

14. Cancelled.

15. (Previously Presented) A serving device for serving pages of viewable data to browsing devices connected to a network, wherein a page of said viewable data comprises content data defining text and/or graphics and formatting data which specifies locations of said text and/or graphics within a page, and said viewable data is displayed at a browsing device such that locations of said text and/or graphics depend on said formatting data, said serving device comprising:

identifying means for identifying requests from browsing devices that define a request for specified content data;

data storage means storing content data;

function storage means storing executable functions;

a user database comprising information relating to user preferences; and

processing means configured such that, in response to said identifying means identifying a request for specified content data and a user identifier, said processing means:

(a) reads user preference information from said user database in response to a received user identifier,

(b) selects content data from said data storage means in dependence upon the content data specified in a request received by said identifying means;

(c) receives format identifiers identifying the type of formatting required;

- (d) selects a set of functions from said function storage means in dependence upon a received format identifier and said read user information; and
- (e) executes said set of functions to generate viewable data comprising said selected content data and formatting data.

16. (Previously Presented) A serving device as in claim 15 wherein said format identifier is received via said identifying means with said request for specified content data, whereby viewable data is served to a browser for display with a format which depends upon the particular format identifier received from said browser.

17-18. Cancelled.

19. (Previously Presented) A serving device as in claim 15 wherein said viewable data is HTML (hypertext markup language) data, and said formatting data comprise of HTML tags.

20-21. Cancelled

22. (Currently Amended) A method for serving pages of viewable data to browsing devices connected to a network, wherein a page of said viewable data comprises content data defining text and/or graphics and formatting data which specifies locations of said text and/or graphics within a page, and said viewable data is displayed at a browsing device, said method comprising:

maintaining a user database comprising data relating to user preferences determined from a history of usage by users;

identifying requests from browsing devices that define a request for specified content data and a user identifier;

storing content data; and

in response to identifying a request for specified content data:

(a) reading specified user data from said user database, such that said specified user data corresponds to a received user identifier;

(b) selecting content data in dependence of the content data specified in a received request and said specified user data read from said database;

(c) receiving format identifiers identifying the type of formatting required;

(d) executing a first set of functions to generate viewable data comprising said selected content data and first formatting data when a first format identifier is received; and

(~~de~~) executing a second set of functions to generate viewable data comprising said selected content data and second formatting data when a second format identifier is received,

such that viewable data is served to a browser for display with locations of said text

and/or graphics ~~which depends~~ that depend upon the particular received format identifier.

23. (Previously Presented) A method as in claim 22 wherein said format identifiers are received from browsing devices with said requests for specified content data, such that viewable data is served to a browsing device for display with a first format when a first format identifier is received from said browsing device, and a second format when a second format identifier is received from said browsing device.

24. (Previously Presented) A method as in claim 22 further comprising maintaining a text database which has an index and adjusting the index of said text database after reading

specified user data but before selecting content data such that said selected content data is dependent upon a received user identifier.

25. (Previously Presented) A method as in claim 22 further comprising maintaining graphics database which has an index and adjusting the index of said graphics database after reading specified user data but before selecting content data such that said selected content data is dependent upon a received user identifier.

26. (Currently Amended) A method for serving pages of viewable data to browsing devices connected to a network, wherein a page of said viewable data comprises content data defining text and/or graphics and formatting data which specifies locations of said text and/or graphics within a page, and said viewable data is displayed at a browsing device, said method comprising:

identifying requests from browsing devices that define a request for specified content data;

storing content data;

maintaining a function database comprising a plurality of sets of functions including a first set of functions and a second set of functions;

maintaining a user database comprising information relating to user preferences, and

in response to identifying a request for specified ~~data~~ content data:

(a) reading user preference information from said user database in response to received user identifier;

(b) selecting stored content data in dependence of the content data specified in a received request,

- (c) receiving format identifiers identifying the type of formatting required,
 - (d) selecting a set of functions from said function database in ~~dependent~~dependence upon said received format identifier and said read user preference information;
 - (e) executing a first set of functions to generate viewable data comprising said selected content data and first formatting data when a first format identifier is received; and
 - (f) executing a second set of functions to generate viewable data comprising said selected content data and second formatting data when a second format identifier is received;
- such that viewable data is served to a browser for display with locations of said text and/or graphics ~~which~~that depend upon the particular received format identifier.

27. (Currently Amended) A method for serving pages of viewable data to browsing devices connected to a network, wherein a page of said viewable data comprises content data defining text and/or graphics and formatting data which specifies locations of said text and/or graphics within a page, and said viewable data is displayed at a browsing device, said method comprising:

- identifying requests from browsing devices that define a request for specified content data;
- storing content data;
- maintaining a user database comprising information relating to user preferences;
- maintaining a function database containing a plurality of sets of functions and an index, in response to identifying a request for specified content data:
- (a) reading ~~specific~~specified user preference information from said user database in response to a received user identifier;

(b) adjusting the relationship between said index and said sets of functions within said function database in response to said specific user preference information;

(c) selecting stored content data in dependence of the content data specified in a received request;

(d) receiving format identifiers identifying the type of formatting required,

(e) executing a first set of functions to generate viewable data comprising said selected content data and first formatting data when a first ~~format~~format identifier is received; and

(f) executing a second set of functions to generate viewable data comprising said selected content data and second formatting data when a second format identifier is received, such that viewable data is served to a browser for display with locations of said text and/or graphics ~~which~~that depend upon the particular received format identifier and upon said specific user information.

28. (Previously Presented) A method as in claim 22 wherein said stored content data is a content database and a separate function database is maintained comprising a plurality of sets of functions including said first set of functions and said second set of functions, whereby said content database may be edited before combining said content data with formatting data.

29. (Previously Presented) A method as in claim 22 wherein said viewable data is HTML (hypertext markup language) data, and said first and second formatting data comprise of HTML tags.

30. (Previously Presented) A method for serving pages of viewable data to browsing devices connected to a network, wherein a page of said viewable data comprises content data

defining text and/or graphics and formatting data which specifies locations of said text and/or graphics within a page, and said viewable data is displayed at a browsing device such that locations of said text and/or graphics depend on said formatting data, said method comprising:

identifying requests from browsing devices that define a request for specified content data;

storing content data;

storing executable functions;

maintaining a user database comprising information relating to user preferences; and

in response to identifying a request for specified content data and a user identifier:

(a) reading user preference information from said user database in response to a received user identifier;

(b) selecting stored content data in dependence upon the content data specified in a received request;

(c) receiving format identifiers identifying the type of formatting required;

(d) selecting a set of stored functions in dependence upon a received format identifier and said read user information; and

(e) executing said set of functions to generate viewable data comprising said selected content data and formatting data.

31. (Currently Amended) A method as in claim 30 wherein said format identifier is received with said request for specified content data, whereby viewable data is served to a browser for display with a format ~~which~~that depends upon the particular format identifier received from said browser.

32. (Previously Presented) A method as in claim 30 wherein said viewable data is HTML (hypertext markup language) data, and said formatting data comprise of HTML tags.
